

Box plot showing the distribution of p95 latencies for different test cases. The x-axis is logarithmic, ranging from 10² to 10⁴ ms. The y-axis lists test cases: p95 1927ms, p95 120ms, p95 101ms, p95 182ms, p95 442ms, p95 1706ms, and p95 510ms. Each test case has a corresponding box plot with a colored box (purple, green, teal, light green, red, orange, blue) and a black line representing the median and interquartile range. Outliers are shown as grey dots.

Latency per decision (ms, log scale)
